

How to make a ROBOT

You will need: 1 x A4 sheet of metallic or shiny card Scissors
2 paper fasteners Pencil Glue stick
Coloured paper or magazine pictures

- ① Take one piece of tinfoil card + divide into 3 sections about the same size, on the reverse of card.

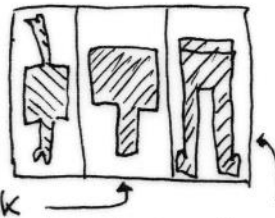

- ② In the top section draw the outline of a robots body and arms.

* Remember to fill the space available or your robot will be too small.

- ③ Next, turn your card sideways and draw the robot head.

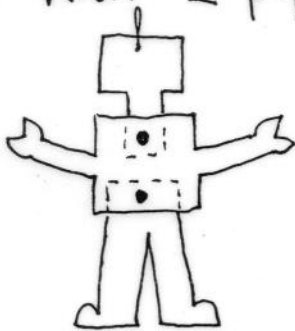

* Make sure you draw an extra long neck

- ④ Finally draw the outline of the robots legs joined together

- ⑤ Cut out the 3 robot pieces carefully.

- ⑥ With 2 paper fasteners join your robot pieces together.

* Remember to put the fasteners through the body part first, attach the neck + legs from behind.

* HINT: Twist the paper fastener while pushing, to make the holes in card.

- ⑦ Punch a hole in the top of your robots head + attach some wool, so it can be hung up.

- ⑧ Decorate your robot using collage, glueing onto head + body
