

Kaleidocycle

Instructions

1. After drawing your patterns and colouring in, carefully cut out your decorated kaleidocycle following the black line.

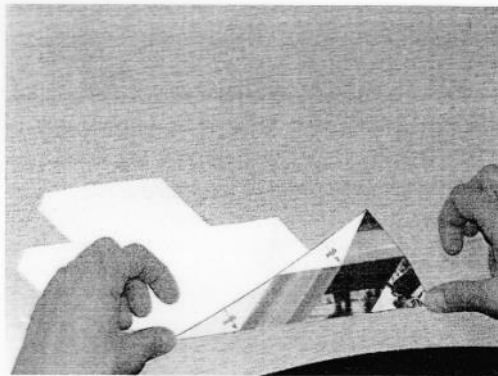

2. With the decorated side facing up, fold along all the vertical lines. (Using a ruler as a straight edge makes this easier).

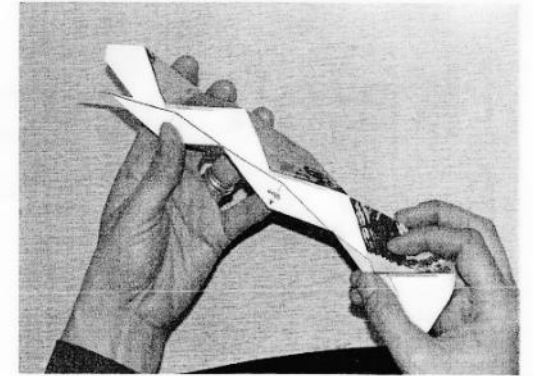

3. Next, fold along all the diagonal lines that make the diamond shapes.

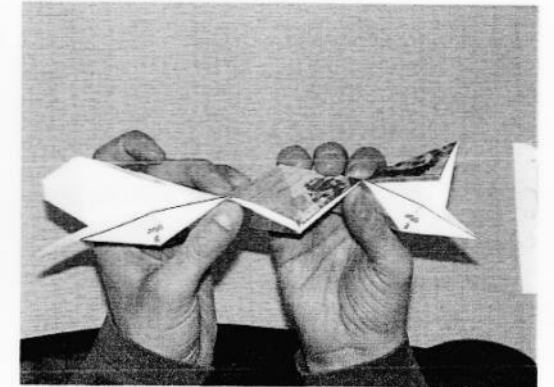

4. Turn the sheet over so the blank side is facing up and re-fold along all the diagonal lines.

5. Now push together point A with the point opposite and stick with tape along both open edges.

6. In the same way stick together points B and C.

7. Stick together the end tabs with tape, bring the ends of the Kaleidocycle together and slot the tab into the open end. Stick down with tape.
